I find that XFM Sattelite Radio is very valuable while travelling. To allow the inclusion of a special channel to broadcast weather reports and highway information in the area one is traveling is of great importance and should be allowed. Last week on our way to Yuma, AZ it would have been nice to know before-hand about the sand storm we ran into, XFM radio would have been able to advise us about it and its severity, prior to our abrupt interface with it. We would have never been able to find this on an AM-FM search.

Stick to the principals as defined by freedom of speech and that no one has a the right to control the radio bradcasting waves. Please reject " NAB's petition 04-160.
